

Active serums in ampoules contain the maximum concentrations of active ingredients (vitamins, peptides, antioxidants, plant extracts...). They are designed for the intensive course treatments with specific skin imperfections and obtaining visible results in the shortest possible time. So, an 8-10 days course helps to significantly moisturize, rejuvenate the skin, and gives it radiance. The use of ampoules can last longer - 1-2 months on the recommendation of a cosmetologist. Then a break is taken.

The use of ampoules is convenient, since the amount of serum required for one application is strictly dosed.

Serums are applied in the morning and evening after cleansing the skin (the exception is the serum Glycolic Acid Care ampoules ref. AC4107). After absorption, we recommend "covering" with cream.

One ampoule can be used for two applications / morning and evening/.
